Ever since I was a little kid, computer science has been my passion. I still remember writing my first code in QBASIC to print "Hello World" and being fascinated with it. It was almost magic, being able to get the computer to do whatever I wanted, just by typing in some lines of codes, limited only by my imagination and ingenuity. Throughout high school, I learned programming languages like C and Python and also Django framework to make basic websites.

This passion for computer science landed me as a student in the NYU Global Network.

Now, this passion remains with me. There's certainly yet more to learn, yet more problems to solve, and yet more to build.
